***Allowable Subject Matter***

8. Claims 28-29, 32-44 and 47-59 are allowed.

9. The following is an examiner's statement of reasons for allowance:

The stereomicroscope as recited in the independent claim 28 is patentable with respect to the prior art, in particular, the Pub. No. 2002/0034001 and the U.S. Patent Nos. 6,930,828; 4,697,893 and 5,349,468 by the limitations related to the structural relationship among the beam splitter for combination two stereoscope observation beam paths, the system for coupling an illuminating beam path, a carrier bearing the microscope body, a switching device and a gear for automatically displace the carrier to compensate a displacement between the emerging beam path of the beam splitter with respect to the symmetric axis of the two observation beam paths as recited in the claim. It is noted that the use of

a beam splitter, a switching device, a carrier and a mechanism having gear for displacement the carrier is disclosed in the mentioned Publication and the use of an illuminating system for coupling light onto an objective lens is disclosed in the Patent No. 5,349,468; however, the cited art does not suggest a combination of optical elements and their mechanical supports for meeting the device as claimed.

b) The element for a stereomicroscope as recited in the independent claim 58 is patentable with respect to the prior art, in particular, the Pub. No. 2002/0034001 and the U.S. Patent Nos. 6,930,828; 4,697,893 and 5,349,468 by the limitations related to the structural relationship among the microscope holder, a gear, a carrier for a microscope body that can be displayed relative to the holder, a switching device supported on the holder which switching device comprises a lens mounted for at least one stereo lens and at least one compound lens, and a beam splitter wherein all mentioned components form a single unit which can be selectively be connected with or detached from a focus adjusting mechanism of a stand and a microscope body as claimed. It is noted that the use of a beam splitter, a switching device, a carrier and a mechanism having gear for displacement the carrier is disclosed in the mentioned; however, the cited art does not suggest a combination of optical elements and their mechanical supports form a single unit which can be selectively be connected with or detached from a focus adjusting mechanism of a stand and a microscope body as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
